

Brandon Martinez

Weekly Report #1

Throughout the week, I was conceptualizing the idea of IoT. It can refer to many features and behaviors like connectivity (Bluetooth), Internet Access (Ethernet or Wifi), Sensing, Control, and Function. I think these are the basic characteristics that make up an IoT system.

For my portfolio, I will be using my Github profile to upload my work for this class. You can look at my repository with this link: <https://github.com/Brandoni23/IoT-Portfolio>.

I am looking forward to work with Professor Alan Marchiori and dig into the field of IoT.
